Airfoil numerical evidence | accepted steady endpoints
5° · Re = 100 · local trailing-edge sensitivity
Fluent · scaled residuals
Largest terminal equation residual
Steady iteration
OpenFOAM · maximum initial residual per iteration
Largest terminal equation residual
Steady iteration
Baseline
Local 1
Local 2
Acceptance target
Final 100 force samples
Cd change from final value (%)
Iteration relative to accepted endpoint
Final 100 force samples
Cd change from final value (%)
Iteration relative to accepted endpoint
Residual definitions differ between codes. OpenFOAM uses the maximum initial residual over all pressure corrections.
Flat Fluent force windows reflect printed report precision. Numerical convergence does not establish discretization accuracy.
