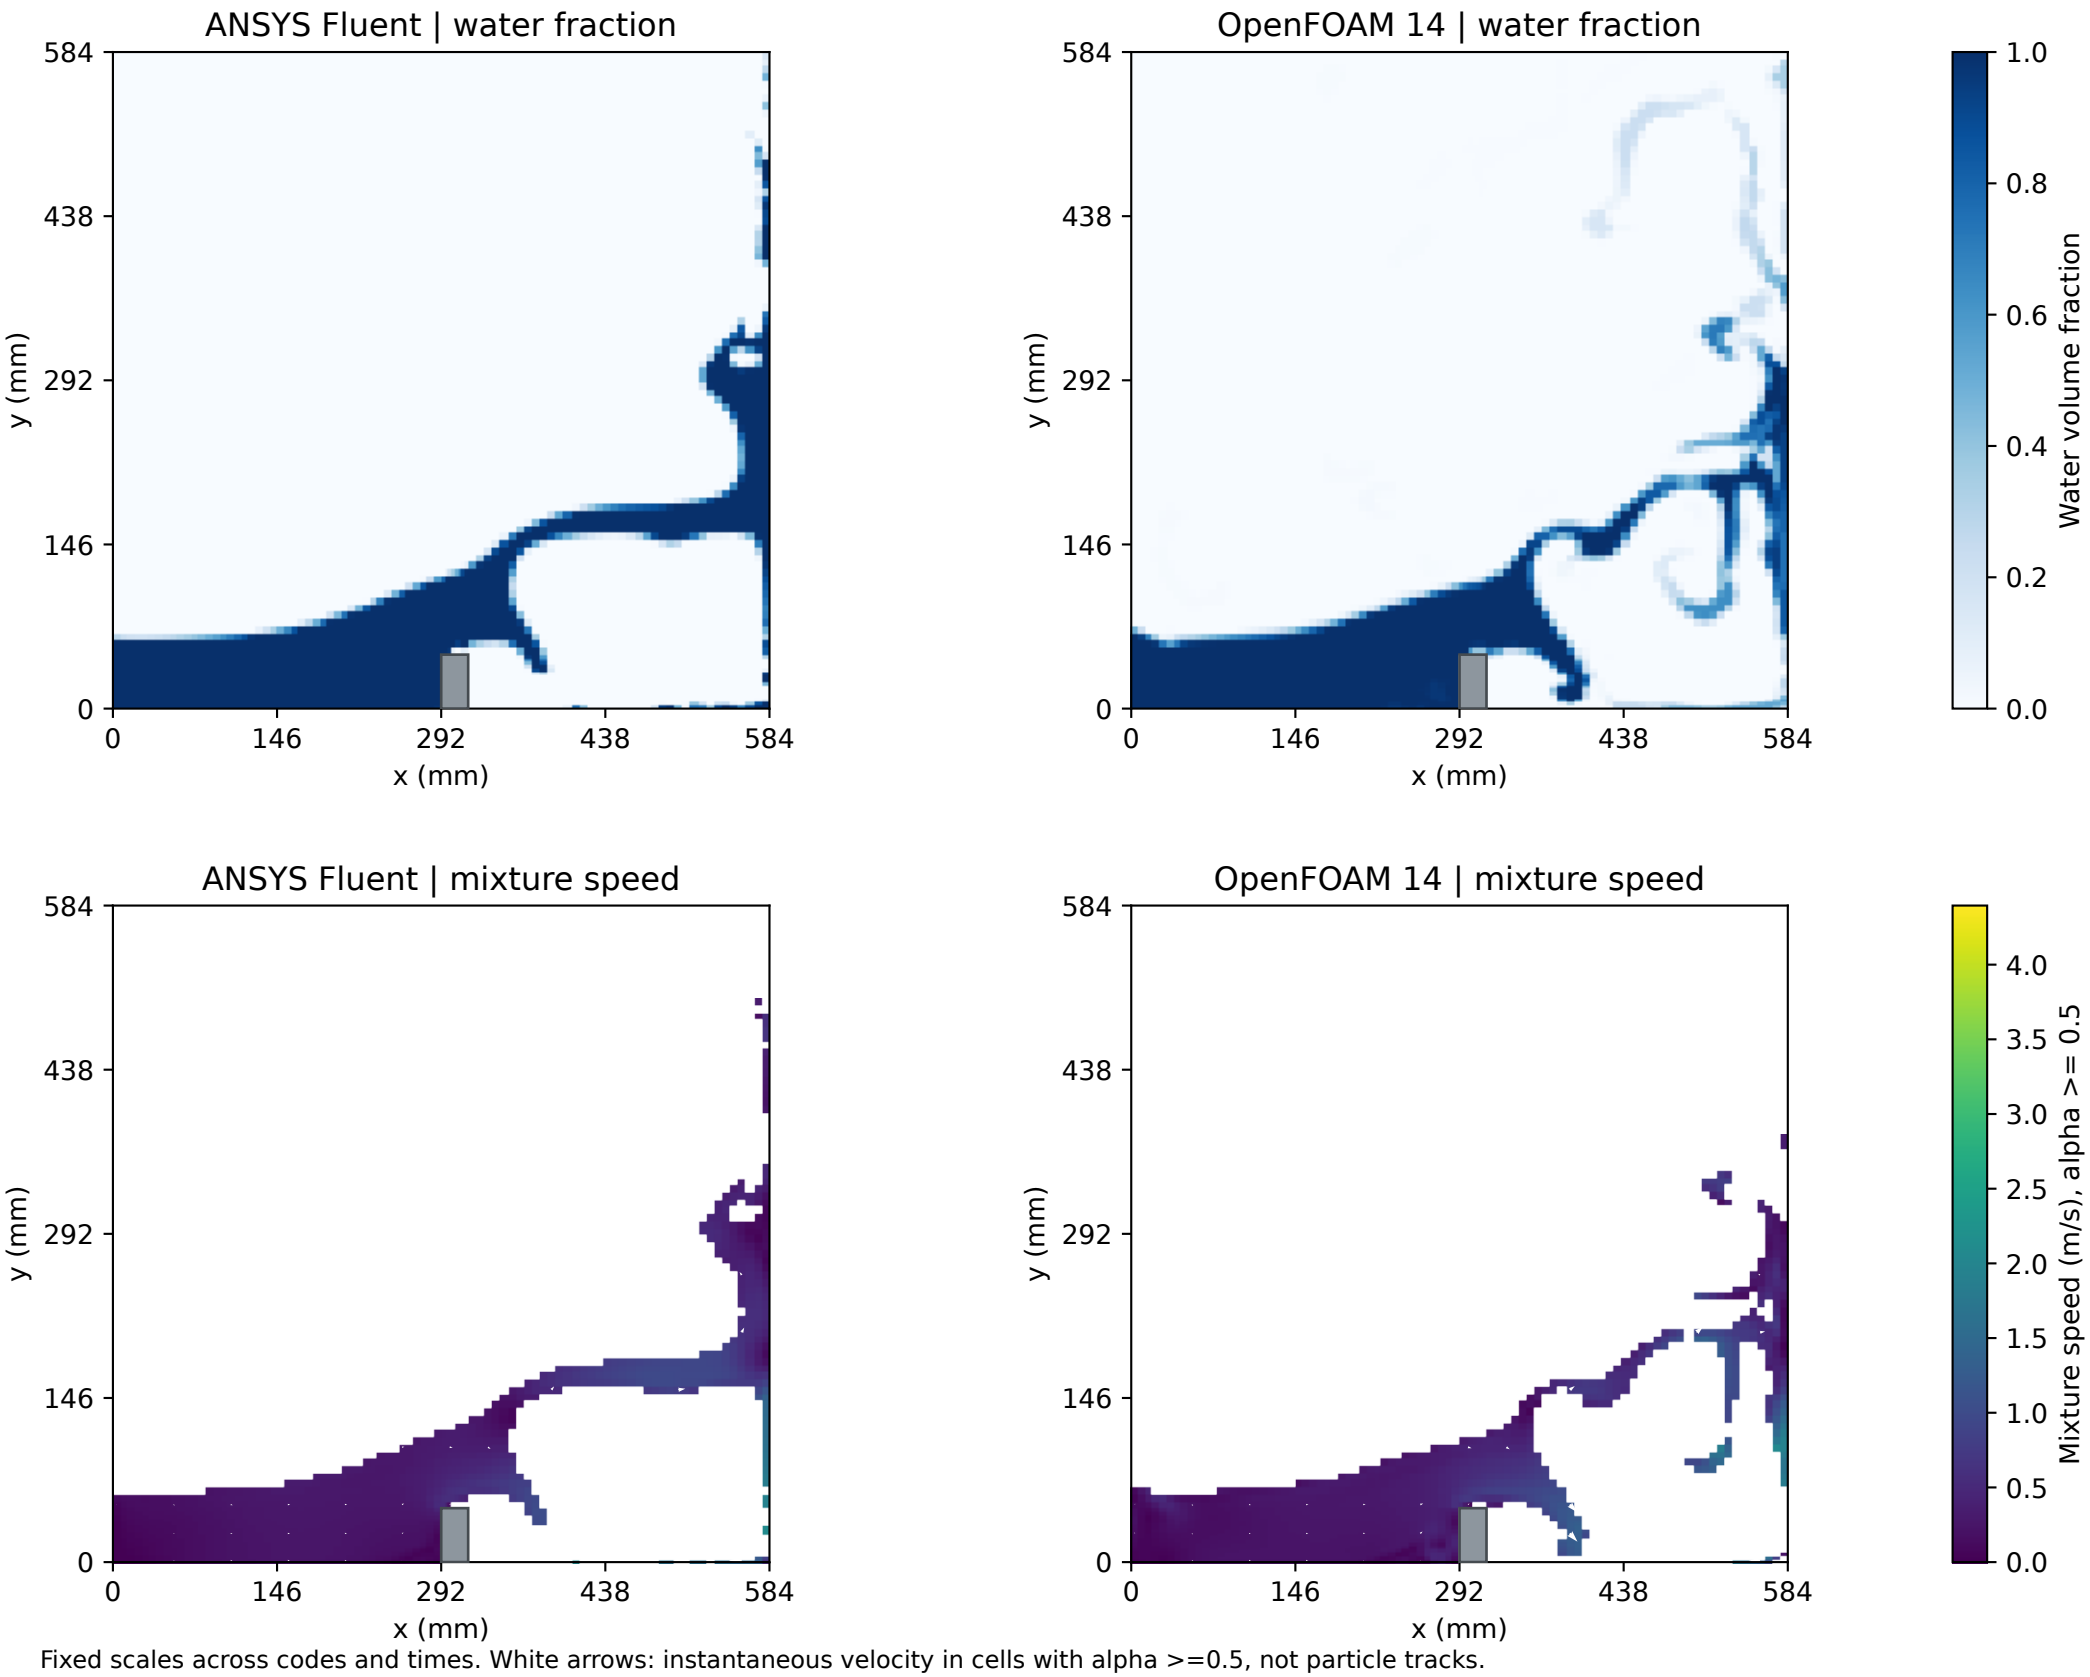
Dam break over an obstacle

Physical time t = 0.500 s

9,072 cells | Fluent dt = 0.05 ms | OpenFOAM dt = 0.05 ms | static open atmosphere



Fixed scales across codes and times. White arrows: instantaneous velocity in cells with alpha >=0.5, not particle tracks.

101 actual native states, 0.005 s apart, played at 12 fps; no generated intermediate motion.

Declared numerical checks pass. Mesh/time independence and experimental validation remain open.
