Warm air above a small floor heater

Twenty-second plume development | t = 20.00 s

301 K heater (red) | 300 K ceiling (blue) | Ra(H) = 99,238

Actual cell-centred solver fields; fixed scales across both solvers and all frames.
White lines: instantaneous streamlines, hidden below 0.5% of the global maximum speed.
3,840 cells | dt = 0.01 s | educational calculation; physical validation remains open.
