Dam break | quiet-water control

Actual native t = 0.020 s | 200 steps | 9,072 cells | dt = 0.1 ms

Both short-run numerical audits passed. The full 0.5 s calculation has not yet been computed.

Grey: solid obstacle. Velocity shown only in cells with alpha >=0.5; arrows below 0.5% of the common scale are hidden.

Quiet-control speed scale is fixed at its 1e-4 m/s acceptance limit.

Source-bound native fields and clocks checked. These qualification results do not establish physical validation.
